Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Solution Requirements:

Solution requirements describe what the system must do and how well it must do it. Functional requirements cover the features and behavior the solution provides, while non-functional requirements cover qualities such as usability, security, reliability, performance, availability and scalability.
The requirements below are for automating standard laptop orders in ServiceNow with Flow Designer, from the employee request through approval, fulfilment and delivery.

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Laptop request	Standard laptop catalog item in the service catalog Request form pre-filled from the employee's user record Eligibility check and duplicate request blocking
FR-2	Approval management	Automatic approval for pre-approved roles Approval task sent to the manager by email or mobile Budget check against the cost center Automatic escalation of approvals pending over 2 days
FR-3	Inventory and fulfilment	Automatic stock check in asset inventory Laptop reservation when stock is available Purchase order created automatically when stock is low Vendor assigned by region or contract price
FR-4	Notifications and tracking	Notifications at each stage (approved, shipped, delivered) Request status visible on the employee portal
FR-5	Asset management	Asset record created automatically on delivery Asset assigned to the requesting employee
FR-6	Reporting	Dashboard of request turnaround time Report of automated requests and cost savings

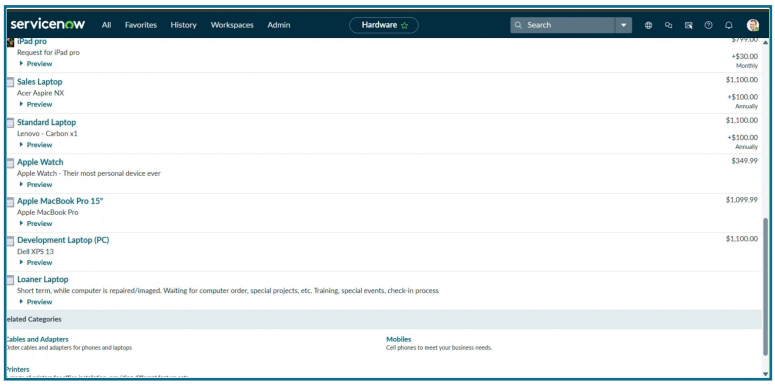

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

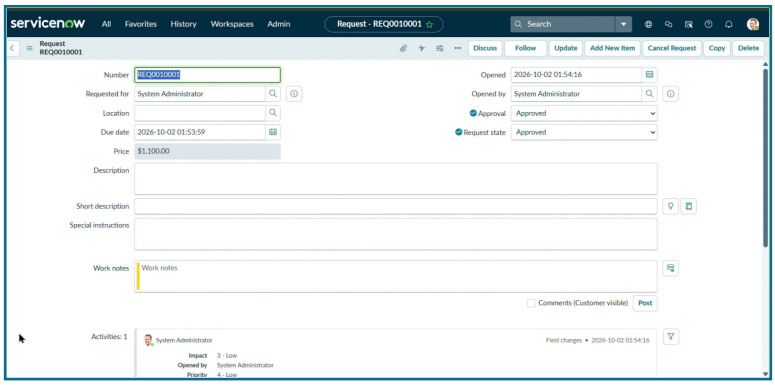

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Employees can request a standard laptop in a few steps from one catalog item, with clear form fields and status messages.
NFR-2	Security	Access follows ServiceNow role-based access control. Only managers can approve requests, and request and asset data is visible only to authorized users.
NFR-3	Reliability	Flows complete consistently and failed steps are logged and retried or routed to the coordinator, so no request is lost.
NFR-4	Performance	Standard requests move through automated steps without manual delay. Routine flow actions complete within seconds.
NFR-5	Availability	Request, approval and tracking features are available during business hours, following the availability of the ServiceNow instance.
NFR-6	Scalability	The flow handles growth in request volume and supports new laptop models, roles and vendors by changing configuration rather than rebuilding.

Screenshots

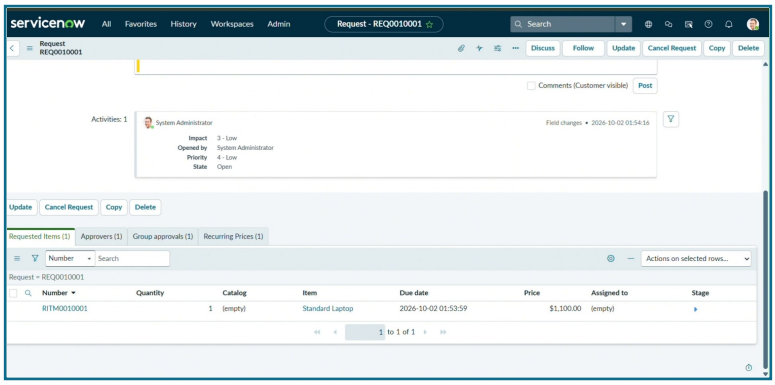

Screenshots of the ServiceNow prototype that demonstrate the requirements covered so far.

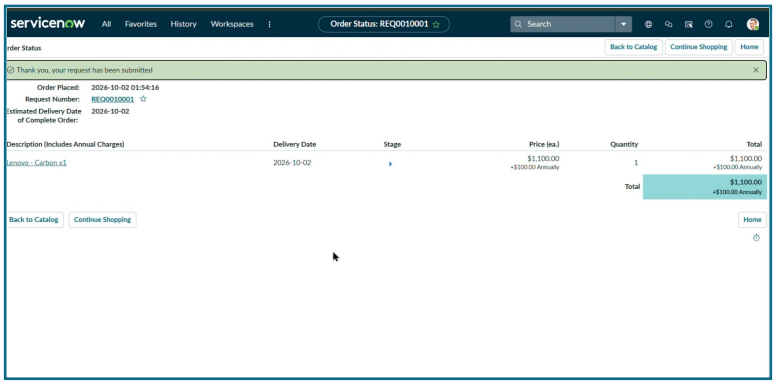

FR-1: Standard laptop catalog item in the service catalog

FR-2: Approval recorded on the request (Approval and Request state Approved)

FR-3: Fulfilment catalog task created automatically for the requested item

FR-4: Request status shown on the order status page
