## Proposed Solution Template:

Project team shall fill the following information in the proposed solution template. It describes the problem being solved, the idea behind the solution, what makes it different, the benefit to users, how it creates value, and how it can grow.
**Project:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer.

| S.No. | Parameter | Description |
|---|---|---|
| 1 | **Problem Statement (Problem to be solved)** | Ordering a standard laptop depends on manual hand-offs. Employees wait on email approvals with no clear status, managers chase missing details, and IT staff re-enter data, check stock by hand and create purchase orders manually. This delays new hires and wastes IT time on repetitive work. |
| 2 | **Idea / Solution Description** | Automate the standard laptop order in ServiceNow using Flow Designer. An employee submits one catalog request with details pre-filled. The flow checks eligibility, approves automatically for pre-approved roles or sends a one-click approval to the manager, checks stock, creates a purchase order if needed, creates and assigns the asset record, and notifies the employee at every stage. |
| 3 | **Novelty / Uniqueness** | The solution connects request, approval, inventory, purchasing and asset records in one low-code flow, instead of separate manual steps. Rules such as pre-approved roles, budget checks, automatic escalation and vendor assignment by region or price can be changed through configuration, without custom code. |
| 4 | **Social Impact / Customer Satisfaction** | Employees get devices faster and can see request status, so new hires can start work on day one. Managers spend less time on routine approvals. IT staff spend less time on repetitive tasks and more on exceptions and support, which improves satisfaction for everyone involved. |
| 5 | **Business Model (Revenue Model)** | This is an internal efficiency solution rather than a revenue product. The value comes from shorter request turnaround, less manual effort, fewer errors and better use of procurement budget. It runs on the organization's existing ServiceNow platform, so no new tools need to be bought. |
| 6 | **Scalability of the Solution** | The flow can handle growing request volume and new laptop models, roles, locations and vendors by updating catalog variables, decision rules and subflows. The same pattern can be reused for other standard hardware such as monitors, phones and accessories. |

# Screenshots

Screenshots of the working prototype built in ServiceNow with Flow Designer.
