Project Development Phase
Model Performance Test

Date	31 January 2025
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

The project team shall complete the details below in the model performance testing template. This project is a Flow Designer automation and not a trained model, so the metrics show how accurately and how fast the standard laptop order flow executes.

S.No.	Parameter	Values	Screenshot
1	**Metrics**	**Flow Performance:** Success rate - 97% (58 of 60 test requests completed every step) Failed runs - 2, passed to the coordinator by the error-handling flow Average execution time - 3.8 seconds per request **Approval Routing:** Correct routing - 60 of 60 requests (eligible roles auto-approved, all others sent to the manager) Stock decisions - 60 of 60 correct (laptop reserved vs purchase order raised)	Add screenshot
2	**Tune the Model**	**Performance Tuning -** Combined repeated record lookups into one lookup inside a subflow and set notifications to run in the background. Average execution time fell from 5.7 to 3.8 seconds. **Validation Method -** 10 test cases (covering each role, stock and approval scenario) executed in a test instance and checked against expected results, then load tests with 20, 60 and 120 requests.	Add screenshot

Note: the values above are sample results for illustration. Replace them with the measurements from your own test runs, and add screenshots of the flow execution details as evidence.
