Project Development Phase
Model Performance Test

Date	31 January 2025
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

The project team shall complete the details below in the model performance testing template. This project presents its results through ServiceNow reports and dashboards (instead of Power BI), so each row describes the data, filters, calculations and visuals behind the fulfillment time and savings reporting.

S.No.	Parameter	Screenshot / Values	
1	**Data Rendered**	Incident, hardware asset and vendor order tables (3 tables, roughly 320 sample records) are the source for the reports.	Add screenshot
2	**Data Preprocessing**	Duplicate, trial and withdrawn requests excluded, missing department codes tagged, and opened, approved and fulfilled timestamps standardized to date-time format.	Add screenshot
3	**Utilization of Data Filters**	5 filters applied: request state, business unit, office site, priority and month range.	Add screenshot
4	**Calculations / Queries Used (in place of DAX)**	3 calculations: fulfillment time (fulfilled date minus opened date), straight-through approval rate (requests approved without manual review divided by all requests), and effort saving (hours avoided multiplied by cost per hour).	Add screenshot
5	**Dashboard design**	No of Visualizations / Graphs - 4 (open requests by state, mean fulfillment time, automated vs manual approvals, monthly cost savings).	Add screenshot
6	**Report Design**	No of Visualizations / Graphs - 3 (requests per week, supplier lead time, available stock by laptop model).	Add screenshot

Note: the values above are sample values for illustration. Replace them with the details of your own reports and add screenshots of the dashboard and reports.
