Project Development Phase
Model Performance Test

Date	31 January 2025
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

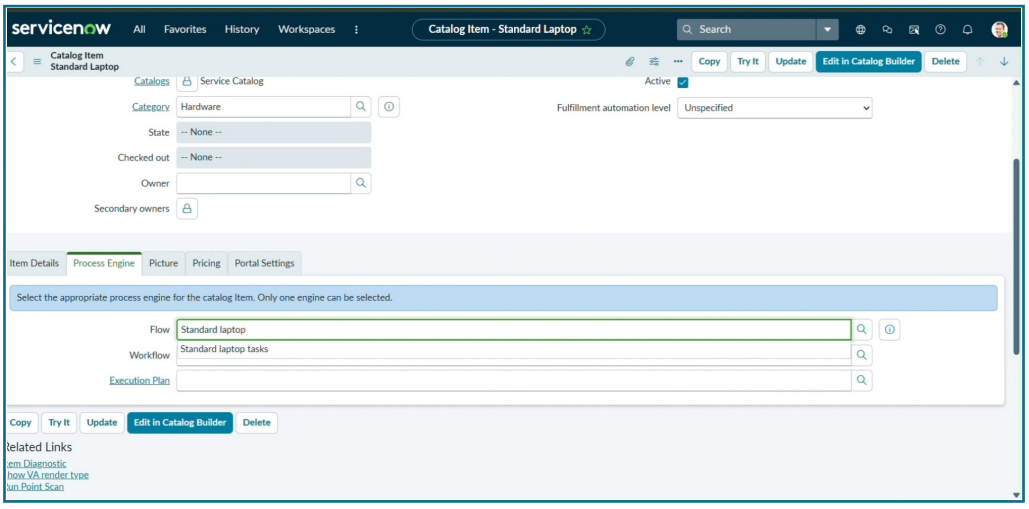

The project team shall complete the details below in the model performance testing template. This project is a Flow Designer automation and not a trained model, so accuracy here refers to the proportion of test requests for which the flow delivered the expected result.

S.No.	Parameter	Values	Screenshot
1	**Model Summary**	**Solution:** Standard laptop ordering workflow automated with ServiceNow Flow Designer, with tables, fields and reports used to hold the request data. 1 catalog item (Standard Laptop) starts 1 primary flow that calls 3 subflows (approval routing, inventory check and purchase order, asset creation and user notification). **Note:** A request record is only created when the submitted data passes the validation rules (employee eligibility, mandatory fields, cost center). If not, an error message is displayed.	Add screenshot
2	**Accuracy**	**Training Accuracy -** 90% (18 of 20 development test requests gave the expected result) **Validation Accuracy -** 95% (57 of 60 independent test requests gave the expected result)	Add screenshot
3	**Confidence Score (Only YOLO Projects)**	Not applicable. This row applies only to YOLO (object detection) projects, and this solution does not perform object detection.	Add screenshot

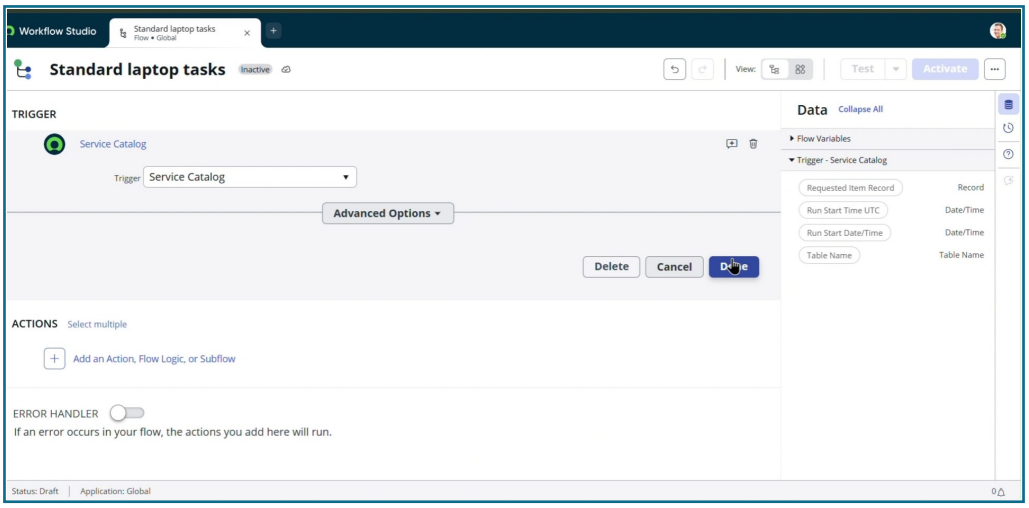

Note: the values above are sample results for illustration. Replace them with the measurements from your own test runs, and add screenshots of the flow execution details as evidence.

Screenshots

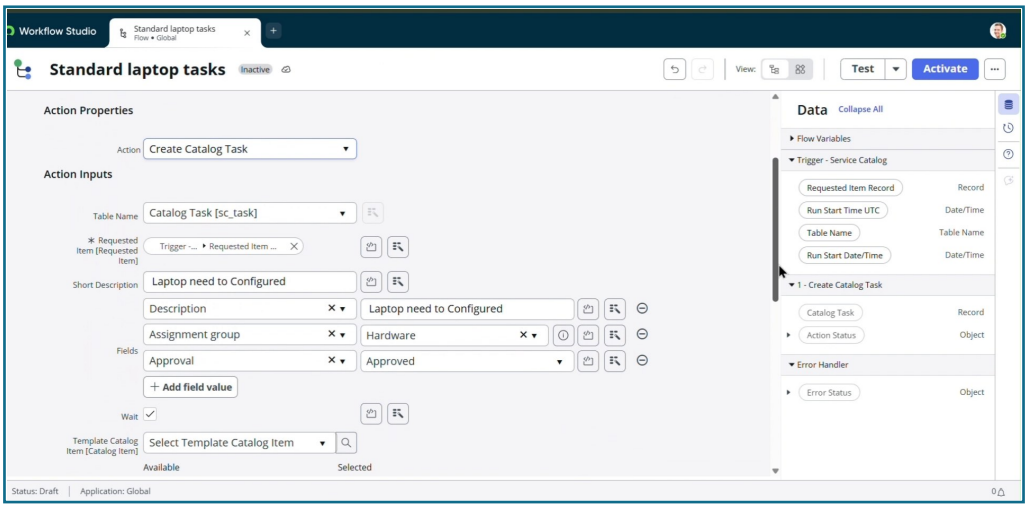

Screenshots for the Model Summary row: catalog item, flow trigger and flow action used by the Standard Laptop workflow.

S.No. 1 Model Summary: Standard Laptop catalog item starts the "Standard laptop tasks" flow

S.No. 1 Model Summary: Flow trigger set to Service Catalog

S.No. 1 Model Summary: Create Catalog Task action configured in the flow
