Project Development Phase
Performance Test

Date	31 January 2025
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

The project team shall complete the details below in the model performance testing template. This project presents its results through ServiceNow reports and dashboards (instead of Tableau), so each row describes the data, filters, calculation fields and visuals behind the fulfillment time and savings reporting.

S.No.	Parameter	Screenshot / Values	
1	**Data Rendered**	Service ticket, hardware inventory and supplier order tables (3 tables, around 300 sample records) supply the data for the reports.	Add screenshot
2	**Data Preprocessing**	Trial, duplicate and withdrawn requests removed, missing cost center values flagged, and submitted, approved and shipped dates converted to date-time fields.	Add screenshot
3	**Utilization of Filters**	5 filters: request state, business unit, office site, priority and month range.	Add screenshot
4	**Calculation fields Used**	3 calculation fields: fulfillment time (shipped date minus submitted date), straight-through approval rate (requests approved without manual review divided by all requests), and effort saving (hours avoided multiplied by cost per hour).	Add screenshot
5	**Dashboard design**	No of Visualizations / Graphs - 4 (open requests by state, mean fulfillment time, automated vs manual approvals, monthly cost savings).	Add screenshot
6	**Story Design**	No of Visualizations / Graphs - 3 (requests per week, supplier lead time, available stock by laptop model), arranged in sequence as a brief story of how the process is performing.	Add screenshot

Note: the values above are sample values for illustration. Replace them with the details of your own reports and add screenshots of the dashboard and reports.
